

## Build better content management solutions with the most robust document conversion and publishing engine

Adlib Software has been building applications for document conversion and rendering for more than 10 years. We are considered pioneers in the industry and our products prove time and again that our reputation for building the most robust, fault tolerant, scalable applications is justified. Through our network of Systems Integrators, VARs and other Software Vendors, solutions built on Adlib Software can be found in thousands of organizations around the world.

Both of Adlib Software's core products, Express Server and Exponent, which make up the foundation of the Adlib's Document Transformation Framework (DTF), can be found under the hood of many leading brands of ECM and Document Management solutions. They perform the working end of document conversion. Whether you need standard conversion to PDF or more complex conversion capabilities, Adlib's applications suit your needs.

### Easy Integration: Service Oriented Architecture (SOA)

All Adlib components are built to take advantage of new SOA technologies making it very easy for partners to seamlessly integrate any of our parts into their solution. Whether you choose to embed the applications into your own solutions; similar to many of our OEM agreements, or make us an integral component of your solutions, you can be sure that the reliability and functionality will be unmatched by anything else on the market.

### Document Processing Integration Methodologies

Adlib provides several methodologies for automatically transforming documents making it easy to integrate with Adlib Software's DTF. Among the various methods, our partners are leveraging XML Job Tickets or Scripting to seamlessly incorporate the functionality of DTF into their overall workflow. Although building either of the above connections is simple, our services team is happy to provide any assistance needed to help make your solution work. As a partner you may want to standardize on one or take advantage of all these methodologies to incorporate DTF into your Document Management Workflow.

### Modular Functionality

Adlib makes it easy and cost effective to only use functionality that you need and choose not to build yourself. We have created a library of functional Add-On modules that can be used independently or in conjunction with each other to create a truly unique solution designed to specifically address your customer's needs. *(For more information go to [www.adlibsoftware.com](http://www.adlibsoftware.com))*
