

## Level 1 Training

### Administrators

# Web-Based Training for Express Server and Express Web Services

Adlib Software web-based training programs provide you with high-quality training without having to leave your home or office. These programs use web-based interactive discussions along with reference materials to optimize your learning experience. The course is designed specifically for those individuals who, because of time, job requirements or travel inconveniences, find it difficult to attend offsite courses.

*This training session has immeasurable benefits for anyone who wants to learn how to fast track implementation and deployment processes, pursue other uses for the applications or gain further ROI than initially anticipated. The entire course curriculum is only 3 hours long but the benefits are limitless*

### System Administrators Level 1 Training APSS1001:

#### An Administrators Course in Express and Web Services

This course focuses on providing the basic training requirements for systems administrators. Attendees will be exposed to key product capabilities and useful options. The instructor will use presentation material as well as actual applications to demonstrate how best to implement the solution and configure it for optimum performance.

Specific attention will be spent on all the various output functions, how to take advantage of those options and how to call them automatically through XML Job Tickets, API's and Watched Folders.

Rapid response and resolution to anomalies in application activity are a vital part of any Administrator's role. Attendees will learn troubleshooting techniques and error log analysis, providing them with the necessary skills for a successful project.

#### Learn the following topics:

- Overview of Express Server Architecture
- Express Server as a Windows Service
- Integrating with Microsoft Office
- Basic Express Server Trouble Shooting
- Configuring Native Application Support
- Extended File Type Support (EFTS)
- Configure Email Inbox Processing
- Hyperlinks and Bookmarks
- Using Page Scaling
- Overlays, Watermarks, Headers and Footers.
- Log Analysis
- Hidden Registry Settings
- Regional Settings
- Job Tickets
- Windows Settings
- Web Services Settings
- MSMQ Settings
- IIS Settings
- Permissions
- Web Services Log Analysis
