## Integrators

# Web-Based Training for Express Server and Express Web Services

Adlib Software web-based training programs provide you with high-quality training without having to leave your home or office. These programs use web-based interactive discussions along with reference materials to optimize your learning experience. The course is designed specifically for those individuals who, because of time, job requirements or travel inconveniences, find it difficult to attend offsite courses.

*With several integration methods, Express Server and Express Web Services inherently offer many flexible techniques for integrating into any form of document workflow. From this 3-hour online course you will learn which methodology works best in different situations for rapid implementation, faster, more robust performance and higher dependability and capabilities.*

### Learn the following topics:

### Integrators Level 1 Training ASPSS2001:

#### Integrators Course in Express Server and Express Web Services

This entry level course for integrators is centered on the process and benefits of the various methods for integrating Express Server and Express Web Services into existing document workflows. Attendees will also be given insight into creating new workflows to take advantage of the functionality inherent in these applications.

In addition to the various integration methods, discussions will revolve around architectural setup including clustering of servers to build better performance through redundancies and scalability.

Attendees will learn about data extraction and how to use this process to parse data, insert data into a database and create metadata that can be used to trigger scripts to automate other Express Server functionality.

- Express Server as a Service vs. Windows Application
- Brief Product Overview
- Overview of Integration Techniques
- Integration Methods
  - Watched Folders
  - Email Processing
  - Scripting
  - XML Job Tickets
- Scripting
- Job Tickets
- Data Extraction
- Zonal OCR
- Implementation Processes and Protocols
- Tips and Techniques
- Solution Architecture
- Building Redundancy
- Scaling Solutions
- Web Service Calls
- Job Types – Uses and Techniques
- Sample Code
