

## Sharing Content with SharePoint

Adlib integrated a diverse range of content repositories, including SharePoint, and delivered an effective means for this engineering consulting firm to merge documents and render them to SharePoint.

### THE CHALLENGE

A western European engineering consulting firm was looking to bring marketing and project documents into a front-end system that includes Microsoft® InfoPath® and SharePoint®. The resulting rendered PDFs need to be stored in a SharePoint repository.

They were faced with a number of tough challenges. This organization needed to:

- Ensure the rendering system can connect with both InfoPath and SharePoint
- Find an efficient way to handle and merge complex documents
- Enable searchability on all files using Optical Character Recognition (OCR) and system metadata

### THE RESULT

Through supple integration with a diverse range of content repositories, including SharePoint, Adlib delivered an effective means for this consulting firm to merge documents, convert them to PDF and store them in SharePoint.

By using Adlib PDF, this consulting organization was able to achieve a number of benefits:

- ✓ Implementation of an end-to-end rendering solution that is connected to SharePoint
- ✓ Improvement in the efficiency of document processing
- ✓ An easy-to-use system for merging complex documents
- ✓ Ability to search for and within files

**Advanced Rendering enabled this consulting organization to implement a solution allowing them to bring complex marketing and project documents into a front-end system.**

### WHAT IS ADVANCED RENDERING?

Advanced Rendering technology takes basic document-to-PDF conversion to a higher level by integrating into the most commonly-used Enterprise Content Management (ECM) systems and automating the conversion of content from multiple sources into more manageable and usable formats to enhance documents at each of the 4 stages of the document lifecycle: capture, manage, archive and deliver.

Adlib PDF Enterprise is the next-generation of Advanced Rendering technology that is ideal for high-volume environments where accurate, scalable and highly-available document-to-PDF conversion and transformation services are required across the enterprise.
